(57) Abstract:

PROBLEM TO BE SOLVED: To utilize the performance of a printer to be used to improve printing quality at the time of printing a Web page by outputting the image of the Web page from a WWW browser to the printer as a bit map image with high resolution corresponding to that of the printer.

SOLUTION: The Web page 2 is generated by a Web page generating application 1. Conversion is executed into an HTML file by a document → HTML file converting means 7 in order to display the document as the Web page 2. At the same time, conversion is also executed into a PDL file by a document → PDL file converting means 8 in order to print the same document. The image in the document in this case is converted into the bit map image with high resolution which is used for printing in the printer. Then, description for linking with a printing file is added to the HTML file by a Web page generating means 10. Then, the Web page 2 is displayed and printed by the WWW browser.
